## Space Saver Staircase Type “Torino”

- A premium indoor space-saving staircase kit made from hardwood treads and handrail.
- The alternating tread design allows the staircase to fit into a much smaller space than a conventional staircase, making it ideal for loft conversions where access is limited.
- Available as straight flight, or with one or two 1/4 platform landings, for 90 degree or 180 degree of turn.
- The platforms can be fitted in a variety of locations in the flight, allowing this system to work in really awkward spaces.
- The stair width is 600mm.
- The 40mm treads and handrail are made from solid beech. They are protected with at least two coats of a tough polyurethane varnish for a great looking finish that will last a long time.
- The 20mm balusters are made from mild steel and are powder coated in either grey or black.
- There is a wide range of useful accessories that include matching landing balustrade and riser bars.
- The “Torino” space saver stair kit can be assembled by any competent DIY person.
- We recommend customers consult their building control office prior to installing any staircase to check that it fully meets their requirements.
- A complete easy to follow installation guide is provided.
- Please call or email for design and/or configuration assistance.

- Please bear in mind that the staircase must be positioned alongside a load bearing wall so that it can be bracketed to the wall.
- The staircase cannot be used without support from a wall.

### Rises and Treads

- The standard staircase fits a floor-to-floor total height of 2100 tot 2760mm with 10/12 rises and 9/11 treads.
- The rise can be adjusted between 210-230mm.
